

Adam Robinson

SENIOR SOFTWARE ENGINEER & TECHNICAL LEAD

Providence, RI · Remote

adamrobinson.tech · GitHub · LinkedIn · adam@adamrobinson.tech

Professional Summary

Solutions-focused technical leader with 15+ years of experience translating complex business and operational needs into production software, platform architecture, and modernization plans. Trusted across 15+ embedded client engagements in fintech, healthcare, industrial technology, insurance, and enterprise environments. Combines systems thinking, stakeholder discovery, technical decision-making, and cross-functional delivery with enough hands-on depth to guide implementation, resolve ambiguity, and carry solutions into production.

Selected Outcomes

- Reduced a core healthcare publishing workflow from weeks to a couple of days by co-designing and delivering a headless CMS architecture.
- Defined the scope and delivered an industrial decommissioning MVP on schedule after resolving domain and planning ambiguity through an onsite Design Sprint.
- Helped architect a Rails service boundary for specialized international investment processing and advanced shared localization and frontend-platform capabilities.

Professional Experience

MojoTech · Senior Software Engineer and Technical Lead

Feb 2015–Present · Providence, RI and remote

Software consultancy · Embedded across 15+ client organizations

iCapital · Senior Software Engineer Consultant

May 2024–Present · via MojoTech

- Helped architect and implement a Rails backend service for Nominees, a business unit supporting specialized international investments; translated complex domain workflows into a maintainable service boundary.
- Modernized backend localization with Mobility and migrated custom frontend forms toward a shared internal package, improving consistency and reuse across the investment platform.
- Partner across an enterprise engineering environment on feature delivery, service architecture, localization, and shared tooling using Rails, React, TypeScript, and Node.js.

Healthcasts · Technical Lead

Oct 2022–May 2024 · via MojoTech

- Led technical direction and delivery across publishing, identity, and AI-platform initiatives, helping define project goals, solution approaches, and phased implementation plans.
- Co-designed and implemented a Strapi and React headless CMS workflow that reduced a core publishing process from weeks to a couple of days.
- Helped define and led an Auth0 authentication strategy, including an extensive rewrite of the authentication layer and backend; later led development and implementation of portions of the client's AI platform.

Angi and Handy · Senior Software Engineer Consultant

Nov 2020–Sep 2022 · via MojoTech

- Delivered backend and frontend capabilities across the Angi rebrand and multiple product platforms using Java, Vue, React, Rails, Next.js, and Contentful.
- Adapted to changing business priorities and technology stacks while maintaining delivery continuity across the unified quiz flow, Handy product work, and CMS-driven Angi experiences.
- Managed interns rebuilding the Careers experience, then assumed ownership of the remaining implementation to carry the initiative through completion.

Shell Techworks · Software Engineer

Jun 2018–Jul 2019 · via MojoTech

- Worked onsite with business and technical stakeholders to turn an ambiguous, high-cost operational problem into a defined MVP using the Google Design Sprint process.
- Designed and built a React and Node.js application that ingested offshore-platform data and evaluated least-cost paths for decommissioning end-of-life assets; delivered the MVP on schedule.

Additional Embedded Client Engagements

2015–2020 · via MojoTech

Two Sigma (investment management) · Credit Karma (consumer finance) · Schneider Electric (industrial technology; technical lead) · Welltok (healthcare) · Amica Mutual (insurance) · School of Motion (education) · AutoRaptor (automotive CRM)

Beacon Mutual Insurance · Associate Developer and Production Control

Mar 2011–Feb 2015

- Progressed from deployment and environment management into full-stack and database development for claims, policy, financial transaction, and payment systems in a regulated insurance environment.
- Built broad operational and application context across production support, releases, databases, and business-critical systems, establishing the foundation for later architecture and consulting work.

Architecture and Delivery Capabilities

Solution design and technical discovery • Requirements translation and MVP definition • Backend services and API architecture • Platform and legacy modernization • Authentication and identity strategy • Cloud-based application delivery • Integration and localization workflows • Technical leadership and mentoring • Cross-functional and distributed-team delivery

Technical Foundation

Architecture and delivery: System design, technical discovery, service boundaries, modernization roadmaps, authentication, CMS architecture, localization, delivery coordination, mentorship

Cloud and platforms: AWS, Auth0, GitHub Actions, Docker, Vercel, Netlify, Redis, PostgreSQL, Contentful, Strapi

Engineering depth: TypeScript, React, Node.js, Ruby on Rails, SQL, Java, Vue, Next.js, Express, Elixir/Phoenix, PHP, Svelte
